COMPACT HEAT EXCHANGER FOR  
A COMPACT COOLING SYSTEM

ABSTRACT OF THE DISCLOSURE

5 A heat exchanger including a first header having an inlet therein,  
a second header, an outlet in one of the first and second headers, and a  
plurality of flat tubes extending between the first and second headers for  
carrying a fluid between the first and second headers. A first connector is also  
provided for connecting a first exterior line to one of the first and second  
headers, the first connector being proximate and substantially parallel to an  
end of one of the flat tubes. In a compact cooling system, such heat  
exchangers may be disposed about a radial fan directing air flow outwardly  
away from the fan axis. One of a system inlet and a system outlet are  
connected via the first exterior lines to the first connectors of at least two of the  
heat exchangers.
